THE LIBRARY  
OF  
THE UNIVERSITY  
OF CALIFORNIA

FROM THE LIBRARY OF  
COUNT EGON CAESAR CORTI

MAIN LIB.-AGRI.

Plants are distinguished for their multiplicity and variety; for that exuberance of imagination and taste which they display; & for that sense of elegance & beauty which their maker must have had, to have formed and diversified them.

They are entirely the creation of his choice - the invention of his rich and beautiful fancy -

Sharon Turner's History of the  
World.

All our attempts to investigate the Works of God  
are weak and ineffectual; we feel his interference  
every where, but we cannot apprehend the nature  
of his agency any where - a blade of grass  
cannot spring up, a drop of rain cannot fall,  
a ray of light cannot be admitted from the sun,  
nor a particle of salt be united, with a never  
failing symmetry to its fellows without him - every  
secondary cause we discover, is but a new proof  
of the necessity we are under of ultimately referring  
to Him as the primary cause of all -

Geo Watson.

[illegible]

The Sea Plant recently found in Upper Assam  
in the East Indies - Dr Sigmund lectured on it  
in the Medico Botanical Society 1839.

"

The Metropolitan Botanical can certainly boast of  
Flora, perhaps not to be equaled throughout the  
whole of England - Surrey is particularly rich in  
Orchideous plants - In Kent 2 species of Orchis  
are found, which are not found in Surrey.

Ophrys sphegodes & Ophrys tetraphylla -  
Towards Weymouth & St Albans they make their  
appearance also in great quantities - We have in  
the combined counties of Surrey & Kent 28 species out  
of 36 British species of Orchideous plants, the remaining  
8 being mostly confined either to local or northern  
districts - We in Kent behind in other respects

Althaea hirsuta, Polygonum convolvulus, & P. littorale  
Bupleurum tenuissimum, Hutchinsia petraea. Scilla  
pratensis. Hieracium ligetum. Valerianella  
calistropa. Parietaria quinquefolia. - Gentiana amarella  
& Gentiana pneumonanthe. may be considered  
but a few of them -

The first object of the present work is to  
show the progress of the system of  
the British Museum, 1830.

The first object of the present work is to  
show the progress of the system of  
the British Museum, 1830.

# HORTUS ADDLESTONENSIS.

A DESCRIPTIVE CATALOGUE OF PLANTS, &c.

Mrs A Scott  
with D Scott's grateful  
remembrances.

IN THE GARDEN OF THE

ADDLESTON

## HORTUS ADDLESTONENSIS.

THE PLANTS, TREES, AND SHRUBS, CLIMBERS, AND HERBS, OF EACH SORT,

PROPER SOIL, TIME OF SOWING, SEEDS, AND CULTURE, IN GENERAL, OF THE  
VARIETIES, WITH REMARKS TO GARDENERS.

TO WHICH IS ADDED,

A SELECT LIST OF FRUIT TREES,

WITH DESCRIPTIONS,

AND APPLES,

A CATALOGUE OF GARDEN SEEDS, &c.

# EXPLANATION

THIS work is compiled under the several Genera, with the English Name, if any, followed by the Natural Order and the Librarian Class and Order to which each Genus belongs, and also a notice of the Soil generally considered the most suitable for it.

## ADDRESS.

The first and second Columns denote the several Genera, with the English Name, if any, with Synonymes (in Italics).

The third Column denotes the usual Time of Flowering.

The fourth sets the Heights generally attained (in feet).

The fifth sets the Colour of the Flowers.

THIS little Work, which has been arranged at intervals snatched from the Author's professional avocations, is offered with diffidence to the public, as he is aware that, notwithstanding his best endeavours to render it as correct as possible, it may contain errors which have been overlooked, and for the correction of which he will be thankful to any of his friends. He trusts, however, that this humble attempt will be found in some degree useful in promoting the object designed by the publication of it, which was that of increasing the taste for Horticulture amongst ladies and gentlemen, by making them acquainted with the nature and qualities of those Plants and Fruits which they may already possess, or may in future wish to acquire.

## ADDRESS

---

This little Work, which has been arranged at intervals snatched from the Author's professional avocations, is offered with diffidence to the public, as he is aware that, notwithstanding his best endeavours to render it as correct as possible, it may contain errors which have been overlooked, and for the correction of which he will be thankful to any of his friends. He trusts, however, that this humble attempt will be found in some degree useful in promoting the object designed by the publication of it, which was that of increasing the taste for Horticulture amongst ladies and gentlemen, by making them acquainted with the names and quantities of those Plants and Fruits which they may already possess, or may in future wish to acquire.

# EXPLANATION.

THE words in capitals denote the several Genera, with the English Name, if any, followed by the Natural Order and the Linnæan Class and Order to which each Genus belongs, and also a notice of the Soil generally considered the most suitable for it.

The *first* and *second* Columns denote the Botanic and English Names of the Species, with Synonyms (in Italics).

The *third* Column denotes the usual season of Flowering.

The *fourth* ditto the Heights generally attained (in feet).

The *fifth* ditto the Colour of the Flowers.

The *sixth* ditto contains References to coloured Figures in a few of the most popular publications.

## Abbreviations.

B. Biennials.	R. suitable for growing in Rock
C. Climbing Plants.	Work or in Pots.
E. Evergreen.	S. Suffrutescent or Shrubby.
F. Half Hardy Annuals, requiring to be raised under hand lights or frames.	T. Tender Annuals, requiring to be raised in hot-beds, and are usually kept in the greenhouse.
O. Sweet scented.	
P. requiring Protection from Frost by means of walls, mats, mulch, or frames.	Tr. Trailing or Creeping Plants, also suitable for Rock Work or Pots.

## References to Figures.

Bibloome.

---

The prime qualifications of the Anricula, as stated  
by Bradley, above a hundred years ago, in the  
following - (we consider his interpretations more  
explicit than the prolixities of modern florists)  
First that the flower stem be strong & substantial  
secondly, the foot stalks of the flowers must be  
short, & capable of supporting the flo, on up  
thirdly, that the pipe or neck of each flower  
short: fourthly, that the flowers be large & of  
a regular form = fifthly their colours should  
be bright & well mixed = sixthly that the eye  
be large, round & of a good white = seventhly  
flowers spread themselves flat, & be so wise  
inclined to cup = & lastly, that there be  
good traps of flowers equally spread upon  
the stalk - To these we may add that the  
anthers should close over the style, & well  
fill the mouth of the tube - hence

Hort. Rev. 2. v. 1. 309 -

a compendium of  
The English Flora.
